

VertiCoil® INNERSPRING

VertiCoil®...A constant spring rate through compression is the secret to this exclusive and uniquely supportive innerspring. Leggett & Platt's advancements in fine wire technology allow the creation of a specially designed larger-head open offset coil.

- VertiCoils® react and conform to the individual contours of each person and spring back after use to original height for lasting support.
- Coil design promotes proper spinal support resulting in a more peaceful, restful night's sleep.
- 100% working wire...from the increased strength of the spring arm to the more active shape of the coil barrel; all contribute to improved torso support.
- We supply and control the high quality of our wire product from our own wire mills.

5", 6" and 7" heights available.

- The improved balanced deflection maintains coil stability and increased support when compressed.

The **Active Support Technology®** of innersprings allow your muscles to relax in a more natural sleep position. The coils adjust **instantly** to your sleep movements, **comforting and supporting** your body actively as you dream on.

Designed for VertiCoil, this optional **Edge Support Encasement** offers you long lasting, continuous perimeter support and edge-to-edge sleep surface comfort.
